

If a copyright flag is approved my companions will take steps to insure a non fcc controled network of freedom televisions and will rebroadcast the easily removed copyrighted television programs from off shore serves. Americans have a right to record the information that they pay to receive from they're cable satalite providers and there shall always be someone out there willing to protect that right and provide content. Every copy protect scheme of that past on any medium has been easily broken in a very short amount of time thus your efforts only suete to anger honest consumers. Your programs will be recorded, redistributed and rebroadcaste no matter what you do. Look at the RIAA futile efforts to stop music piracy. They dont have a chance neither do you.
